

Derek Alexander-Wilson. Bio for talks and advisory panel.

My focus is to create ways for us all to become genuinely sustainable, protect biodiversity and ensure future generations can do the same, whilst still enjoying the freedom and choices that democratic societies are based on.

I believe that transitioning from a fossil fuel based economy to a Hydrogen based economy is the only way to achieve these goals and the process will become the next industrial / technological revolution bringing increased equality, prosperity and security to all.

Three important steps are required:

(1) Over a 3 year (max) period transfer global fossil fuel subsidies to the Hydrogen / zero carbon industry.

(2) Within 2 years implement UN based legally binding commitments for each member country to spend at least 5% of GDP on zero carbon / zero pollution energy generation / distribution biodiversity enhancing solutions using proven technology.

(3) Implement UN emergency resolution to enshrine in law "Ecocide" legal protection for the environment and biodiversity as outlined here: <https://www.youtube.com/watch?v=FQKhOPihzSQ>

1 question and 2 facts...

"Why do Grizzly bears not chase mice?"

"All energy is only borrowed and one day we must give it back"

"Every 6 hours enough solar energy hits the Earth's deserts to provide 100% of humanities energy requirements for 1 year"
